I think it's AB. Financial governance policies are not related to cost visualization

upvoted 20 times

Selected Answer: AB

Billing dashboards: Billing dashboards provide a graphical overview of your cloud spending, organized by project, service, and other dimensions. You can use billing dashboards to track your spending over time, identify trends, and troubleshoot any unexpected spikes in costs.

Resource labels: Resource labels are key-value pairs that you can attach to your cloud resources. You can use resource labels to organize and group your resources, and to filter and analyze your cost data. For example, you could label all of your production resources with the label environment=production. This would allow you to easily see how much you are spending on production resources, and to compare your production costs to your development or testing costs.

Selected Answer: AB

The two Google Cloud cost management features that help organizations gain greater visibility into their cloud resource costs are:

A. Billing dashboards: Billing dashboards provide detailed information and insights into your organization's cloud resource costs. They display usage data, cost breakdowns, and trends, allowing you to analyze and monitor your expenditure. You can customize the dashboards to track specific metrics and visualize the cost data in a way that suits your organization's needs.

B. Resource labels: Resource labels allow you to categorize and tag your cloud resources based on attributes that are relevant to your organization's cost management. By applying labels to resources, you can track and analyze costs based on different dimensions such as project, department, environment, or application. This helps in understanding the cost allocation and identifying areas where optimization can be applied.
