EXAM CLOUD DIGITAL LEADER TOPIC 1 QUESTION 167 DISCUSSION

Actual exam question from Google's Cloud Digital Leader

Question #: 167

Topic #: 1

[\[All Cloud Digital Leader Questions\]](#)

An organization suffers a major data leak only six months after upgrading its security system.

What should the organization do to ensure long-term security?

- A. Extend data retention policy lengths to at least seven years.
- B. Pay more to get the best security system available on the market.
- C. Hire cybersecurity experts to further develop their data security plan
- D. Wait for a more advanced security system to be released

Selected Answer: C

To ensure long-term security, the organization should hire cybersecurity experts to review their current security system and develop a comprehensive data security plan. It is important to continuously assess and improve security measures in response to changing threats and evolving technology. Simply waiting for a more advanced security system to be released is not a proactive approach to addressing security concerns. Additionally, extending data retention policies or paying more for a security system does not necessarily address the root cause of the data leak and may not prevent future incidents.

Selected Answer: C

The best approach would be to conduct a thorough investigation to identify the root cause of the breach, take immediate steps to contain the breach and minimize the impact, and then implement a comprehensive remediation plan to prevent similar breaches from occurring in the future. One critical step in this process would be to hire cybersecurity experts to help identify vulnerabilities and develop an improved data security plan. These experts can perform a thorough review of the organization's existing security measures, identify any weaknesses, and recommend improvements to strengthen the organization's security posture.

Hiring cybersecurity experts to further develop their data security plan (option C) is a proactive approach to improving security. These experts can conduct a thorough review of the organization's existing security measures, identify weaknesses, and develop a comprehensive plan to address them. By continually reviewing and improving their security measures, the organization can better protect themselves against future data leaks and cyber attacks.
