**Selected Answer: C**

Cannot be B - even AI cannot replace human intuition! (well, so my tarot card reader tells me anyway)

**Selected Answer: C**

C. Machine learning is well-suited for tasks that involve pattern recognition, prediction, and decision-making based on data. Creating customer recommendations is a classic example of a use case where machine learning algorithms can be effectively applied.

It is not B because machine learning can augment human decision-making and automate repetitive tasks, but it may not fully replace tasks that require human experience, intuition, and subjective judgment, such as creative problem-solving, critical thinking, and ethical decision-making.
