## EXAM CLOUD DIGITAL LEADER TOPIC 1 QUESTION 84 DISCUSSION

Actual exam question from Google's Cloud Digital Leader

Question #: 84

Topic #: 1

[\[All Cloud Digital Leader Questions\]](#)

A retail company stores their product inventory in a legacy system. Often, customers find products on the company's website and want to purchase them in-store.

However, when they arrive, they discover that the products are out of stock.

How could the company benefit from using an application programming interface (API)?

- A. To create personalized product recommendations for customers
- B. To optimize their on-premises legacy system stability
- C. By manually linking each inventory system to the website on a case-by-case basis
- D. By programmatically connecting the inventory system to their website

**Selected Answer: D**

D. By programmatically connecting the inventory system to their website  
The issue is the website shows an item is available at the store, but when the customer gets to the store, they find out that item is out of stock.

**Selected Answer: D**

D. By programmatically connecting the inventory system to their website

Using an Application Programming Interface (API) to connect the website to the inventory system allows for real-time or near-real-time updates on product availability. This means that when a customer checks the product availability online and decides to purchase it in-store, the website can provide accurate and up-to-date information about the product's stock status in the physical store. This helps prevent situations where customers arrive to find out-of-stock items, improving customer satisfaction and experience.

**Selected Answer: D**

By integrating the legacy inventory system with an API, the company can provide real-time inventory updates on its website or mobile app. When a customer finds a product online and wants to purchase it in-store, they can check the availability status through the API. This ensures that the inventory information is accurate and reduces the likelihood of customers encountering out-of-stock products.
