EXAM CLOUD DIGITAL LEADER TOPIC 1 QUESTION 26 DISCUSSION

Actual exam question from Google's Cloud Digital Leader

Question #: 26

Topic #: 1

[\[All Cloud Digital Leader Questions\]](#)

Your company has been using a shared facility for data storage and will be migrating to Google Cloud. One of the internal applications uses Linux custom images that need to be migrated.

Which Google Cloud product should you use to maintain the custom images?

- A. App Engine flexible environment
- B. Compute Engine
- C. App Engine standard environment
- D. Google Kubernetes Engine

Selected Answer: B

B Comput Engine

You can use one of the following image types: Public and Custom images.

Selected Answer: B

You can use Google Compute Engine (GCE) to create and manage virtual machines (VMs) based on custom images. GCE enables you to create new VM instances and specify your custom image as the boot disk for those instances.

The true correct answer is Cloud Storage....

The reason it is A is because the application is being migrated.. so you'll be using M4CE to migrate which will put it in compute engine...

App Engine is an entirely managed, serverless platform for creating and hosting web apps at scale.

Firebase is a platform created by Google for developing mobile and web apps.
