EXAM CLOUD DIGITAL LEADER TOPIC 1 QUESTION 60 DISCUSSION

Actual exam question from Google's Cloud Digital Leader

Question #: 60

Topic #: 1

[\[All Cloud Digital Leader Questions\]](#)

Your organization needs to allow a production job to have access to a BigQuery dataset. The production job is running on a Compute Engine instance that is part of an instance group.

What should be included in the IAM Policy on the BigQuery dataset?

- A. The Compute Engine instance group
- B. The project that owns the Compute Engine instance
- C. The Compute Engine service account
- D. The Compute Engine instance

C also for me, also because MIG uses the Compute Engine default service account for its own operation

It seems to be "C"

When an identity calls a Google Cloud API, BigQuery requires that the identity has the appropriate permissions to use the resource. You can grant permissions by granting roles to a user, a group, or a service account.

Selected Answer: C

To allow a production job running on a Compute Engine instance group to have access to a BigQuery dataset, you should include the service account associated with the Compute Engine instance group to the IAM policy of the BigQuery dataset. The service account represents the Compute Engine instances and is used to authenticate the job's access to the dataset.

By including the service account associated with the Compute Engine instance group in the IAM policy and granting the appropriate BigQuery roles or permissions, you ensure that the production job running on the Compute Engine instances has the necessary access to the BigQuery dataset.

Why are the site Admins correcting the Answers? Even though the "Question Bank updated date" shows latest, still answers are not corrected.
