📄 EXAM CLOUD DIGITAL LEADER TOPIC 1 QUESTION 21 DISCUSSION

Actual exam question from Google's Cloud Digital Leader

Question #: 21

Topic #: 1

[\[All Cloud Digital Leader Questions\]](#)

Your organization needs to build streaming data pipelines. You don't want to manage the individual servers that do the data processing in the pipelines. Instead, you want a managed service that will automatically scale with the amount of data to be processed.

Which Google Cloud product or feature should your organization choose?

- A. Pub/Sub
- B. Dataflow
- C. Data Catalog
- D. Dataprep by Trifacta

Selected Answer: B

Dataflow is a fully managed service that allows you to build and run streaming data pipelines without having to manage the underlying infrastructure. Dataflow will automatically scale your pipelines to meet the demands of your data.

Selected Answer: B

For building streaming data pipelines without the need to manage individual servers and with automatic scalability, Google Cloud offers a managed service called Cloud Dataflow.

Cloud Dataflow is a fully managed, serverless data processing service that allows you to build and execute data pipelines for both batch and streaming data processing. It provides a unified programming model for developing data processing logic and automatically handles the underlying infrastructure and resource management.

Selected Answer: B

Per Google Docs one of the key features of GCP dataflow is, " Minimize pipeline latency, maximize resource utilization, and reduce processing cost per data record with data-aware resource autoscaling. Data inputs are partitioned automatically and constantly rebalanced to even out worker resource utilization and reduce the effect of "hot keys" on pipeline performance"
