EXAM CLOUD DIGITAL LEADER TOPIC 1 QUESTION 64 DISCUSSION

Actual exam question from Google's Cloud Digital Leader

Question #: 64

Topic #: 1

[\[All Cloud Digital Leader Questions\]](#)

Your large and frequently changing organization's user information is stored in an on-premises LDAP database. The database includes user passwords and group and organization membership.

How should your organization provision Google accounts and groups to access Google Cloud resources?

- A. Replicate the LDAP infrastructure on Compute Engine
- B. Use the Firebase Authentication REST API to create users
- C. Use Google Cloud Directory Sync to create users
- D. Use the Identity Platform REST API to create users

Selected Answer: C

To provision Google accounts and groups to access Google Cloud resources based on your on-premises LDAP database, you can set up Google Cloud Directory Sync (GCDS). GCDS is a tool provided by Google Cloud that synchronizes user and group information between your on-premises LDAP directory and Google Workspace (formerly G Suite) directory. Configure GCDS to connect to your LDAP server and sync user accounts, passwords, groups, and organization membership information to Google Cloud.
