EXAM CLOUD DIGITAL LEADER TOPIC 1 QUESTION 102 DISCUSSION

Actual exam question from Google's Cloud Digital Leader

Question #: 102

Topic #: 1

[\[All Cloud Digital Leader Questions\]](#)

An organization wants its users to validate a series of new features for their app.

Why should they use App Engine?

- A. Because their app is containerized and enabled by microservices
- B. Because the updated app will only include new features
- C. To run different versions of the app for different users
- D. To run different versions of the app for the same user

C. To run different versions of the app for different users
AppEngine supports multiversion testing

App Engine supports multiversion testing

Selected Answer: D

Why not D. The users might want to use the stable version for work and the test version for testing. IMHO the question is not clear.

Selected Answer: A

You can run your applications in App Engine by using the App Engine flexible environment or the App Engine standard environment. You can also choose to simultaneously use both environments for your application and allow your services to take advantage of each environment's individual benefits.

App Engine environments

App Engine is well suited to applications that are designed using a microservice architecture, especially if you decide to utilize both environments. Use the following sections to learn and understand which environment best meets your application's needs.

Selected Answer: C

Option A doesn't focus on the part "wants its users to validate a series of new features for their app" .

🗄 👤 **Pankaj1978** 1 year, 10 months ago

A is the correct option. For the users to test some new features of the App, that should run in a containerised environment having bifurcated into microservices so that changes in one part doesn't affect the other parts.
