Google Cloud AI Hub includes a repository of plug-and-play artificial intelligence tools, which makes machine learning easy and accessible for Google Cloud customers to get started. AI Hub provides pre-built machine learning models, such as image recognition and natural language processing, that customers can use as-is or customize to their needs. Additionally, it allows customers to discover, share, and reuse machine learning components, including Jupyter notebooks and TensorFlow modules, with other members of their organization or the broader community.
