Actual exam question from Google's Cloud Digital Leader

Question #: 13

Topic #: 1

[All Cloud Digital Leader Questions]

Each of the three cloud service models - infrastructure as a service (IaaS), platform as a service (PaaS), and software as a service (SaaS) - offers benefits between flexibility and levels of management by the cloud provider and the customer.
Why would SaaS be the right choice of service model?

    A. You want a balance between flexibility for the customer and the level of management by the cloud provider

    B. You want to minimize the level of management by the customer

    C. You want to maximize flexibility for the customer.

    D. You want to be able to shift your emphasis between flexibility and management by the cloud provider as business needs change

Selected Answer: B

With SaaS, the cloud provider takes care of the underlying infrastructure, including hardware, networking, and software updates. The customer does not need to worry about managing or maintaining the infrastructure, allowing them to focus on using the software and meeting their business needs. This reduces the burden of IT management for the customer.

Selected Answer: B

SaaS (Software as a Service) would be the right choice of service model if you want to minimize the level of management required by the customer. In a SaaS model, the cloud provider takes care of managing the infrastructure, platform, and software, allowing the customer to focus solely on using the software application. The provider handles tasks such as maintenance, updates, security, and scalability, relieving the customer of those responsibilities. This allows the customer to minimize their management efforts and instead concentrate on utilizing the software to meet their business needs.

Selected Answer: A

SaaS is a good choice for businesses that want to minimize the amount of IT management they need to do. With SaaS, the

cloud provider takes care of all of the software maintenance, updates, and security. This frees up businesses to focus on their core competencies.

However, SaaS is not as flexible as IaaS or PaaS. With SaaS, businesses are limited to the features and functionality that are provided by the cloud provider. If a business needs a specific feature that is not offered by the SaaS provider, they will need to find a different solution.

Overall, SaaS is a good choice for businesses that want a balance between flexibility and management

Selected Answer: B

The main benefit of SaaS is that it offloads all infrastructure and application management to the SaaS vendor.
