📄 EXAM CLOUD DIGITAL LEADER TOPIC 1 QUESTION 66 DISCUSSION

Actual exam question from Google's Cloud Digital Leader

Question #: 66

Topic #: 1

[All Cloud Digital Leader Questions]

Your organization consists of many teams. Each team has many Google Cloud projects. Your organization wants to simplify the management of identity and access policies for these projects.

How can you group these projects to meet this goal?

A. Group each team's projects into a separate domain

B. Assign labels based on the virtual machines that are part of each team's projects

C. Use folders to group each team's projects

D. Group each team's projects into a separate organization node

`Selected Answer: C`

c is the ans

👍 ↩ 🚩 upvoted 1 times

⊟ 👤 **ceeceevee** 10 months, 3 weeks ago

`Selected Answer: C`

B does not cover all use-cases, since it refers specifically to VMs. C is the correct answer IMHO.

`Selected Answer: C`

Folders in Google Cloud provide a hierarchical structure that allows you to organize and manage resources and projects effectively. You can apply identity and access policies at the folder level, making it easier to control permissions and policies for all projects within a folder.

`Selected Answer: B`

B is correct

👍 ↩ 🚩 upvoted 1 times

⊟ 👤 **afeff** 1 year, 1 month ago

`Selected Answer: C`

this is confusing, the votes say C is the solution whereas the website shows B as correct.

Correct answer is C

👍 ↩ 🚩 upvoted 1 times

⊟ 👤 **hireshgupta** 1 year, 3 months ago

The correct answer is C. Use folders to group each team's projects.

Folders in Google Cloud Platform (GCP) provide a way to group projects together. This can be helpful for simplifying the management of identity and access policies, as well as for organizing your GCP resources.

Selected Answer: C

To simplify the management of identity and access policies for multiple Google Cloud projects, you can group them using folders in the Google Cloud resource hierarchy.

By organizing your projects into folders, you can apply common IAM (Identity and Access Management) policies to all projects within a folder. This helps ensure consistent access controls and permissions across teams and projects. You can also delegate administrative responsibilities at the folder level, allowing team leads or project managers to manage the projects within their respective folders.

Folders provide a way to logically group projects based on organizational structure, business units, or any other criteria that aligns with your organization's needs. This helps streamline management and reduces the need to apply individual policies to each project separately.
