📄 **EXAM CLOUD DIGITAL LEADER TOPIC 1 QUESTION 156 DISCUSSION**

Actual exam question from Google's Cloud Digital Leader
Question #: 156
Topic #: 1
[All Cloud Digital Leader Questions]

An organization wants to move from a tactical cloud adoption approach to a transformational approach.
How should they change their cloud security?

A. Provide staff identities using only Google Cloud authentication.

B. Provide multiple layers of network security using a zero-trust model.

C. Emphasize strong perimeter security and trust in their private network.

D. Emphasize three main Identity Access Management roles: owner, editor, and viewer.

Selected Answer: B

B. Provide multiple layers of network security using a zero-trust model.

A transformational cloud adoption approach requires a shift in security thinking from a perimeter-based approach to a zero-trust approach. In a zero-trust approach, all users and devices are treated as untrusted until they are verified and authorized. This means that security is applied at every layer of the cloud environment, from the network to the application.

Selected Answer: B

https://www.crowdstrike.com/cybersecurity-101/zero-trust-security/

Zero Trust is a security framework requiring all users, whether in or outside the organization's network, to be authenticated, authorized, and continuously validated for security configuration and posture before being granted or keeping access to applications and data
