📄 EXAM CLOUD DIGITAL LEADER TOPIC 1 QUESTION 54 DISCUSSION

Actual exam question from Google's Cloud Digital Leader

Question #: 54

Topic #: 1

[All Cloud Digital Leader Questions]

Your company security team manages access control to production systems using an LDAP directory group.
How is this access control managed in the Google Cloud production project?

- A. Assign the proper role to the Service Account in the project's IAM Policy
- B. Grant each user the roles/iam.serviceAccountUser role on a service account that exists in the Google Group.
- C. Assign the proper role to the Google Group in the project's IAM Policy.
- D. Create the project in a folder with the same name as the LDAP directory group.

Selected Answer: **C**

A is about Service accounts, which is for Apps or VMs, so it's out. B is the typical wrong reply in these kinds of exams where they suggest doing something manually one by one and not efficiently. D sounds wrong to me, just putting the same name and calling it a day? C is the only option, because Google Groups work with LDAP directories.

Selected Answer: C

Identity and Access Management (IAM) allows you to manage access to Google Cloud resources. Within your production project, you can use IAM to grant specific permissions to the LDAP directory group. IAM roles can be assigned to the group, defining the level of access they have within the project. This way, you can control who can perform certain actions on the project's resources.
